ANIKET KADAM

+91-7756069094 | aniketkadam2000feb@gmail.com | Pune, India

SUMMARY

Data Analyst with 3+ years of experience in data analytics, business intelligence, and predictive modeling. Proficient in Python (NumPy, Pandas, Scikit-learn, Matplotlib, Seaborn), SQL, and Advanced Excel for data processing, analysis, and automation. Skilled in building dashboards and interactive reports using Power BI and Tableau, with expertise in statistical modeling, trend analysis, and forecasting. Experienced in endto-end projects such as Sales Forecasting and Data Science Salary Estimator, delivering actionable insights for data-driven decision-making. Strong background in databases (SQL Server, Hadoop, Apache Spark) and automation using Excel Macros

SKILLS

- **Languages:** Python (NumPy, Pandas, Matplotlib, Seaborn)
- **SQL:** Queries, Joins, Sub-queries, Aggregation, Statistical Functions, Data Retrieval
- **Business Intelligence & Visualization:** Power BI, Tableau, Dashboard Development, Report Automation, Forecasting, Interactive Dashboards
- **Data Analysis & Modeling:** Data Cleaning, Statistical Modeling, Trend Analysis, Predictive Analytics, Data Interpretation
- **Databases:** SQL Server, Data Warehousing, Hadoop, Apache Spark • **Excel:** Advanced Excel, Macros, VBA for Automation

EXPERIENCE

Sofrego Private Limited – *Data Analyst* *Jun 2022 – Present*

PROJECTS

1. Sales Forecasting Project
Role: Data Analyst
Tools & Technologies: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, Power BI/Tableau, Excel

Description:
Built a predictive sales forecasting model to analyze historical data and estimate future demand. Conducted data collection, cleaning, transformation, and exploratory data analysis (EDA) to identify trends, seasonality, and key drivers. Developed statistical and machine learning models, delivering forecasts through interactive dashboards to support business decision-making.

Key Responsibilities:

- Collected and pre-processed large datasets using Python and SQL
- Conducted EDA to uncover sales trends, seasonality, and anomalies
- Built and evaluated predictive models using regression and time series techniques
- Automated reports and dashboards in Power BI/Tableau to present forecasts and KPIs
- Collaborated with business teams to align forecasting with sales and marketing strategies
- Improved forecast accuracy by tuning models and incorporating external factors

Project Name: Credit Card Fraud Detection

Role: Data Analyst
Technologies: Python (Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn), SQL, Power BI, Jupyter Notebook

Project Description:

Developed a machine learning-based solution to detect fraudulent credit card transactions by analyzing large transactional datasets, identifying anomalies, and implementing predictive models. The project aimed to minimize financial losses, improve fraud detection accuracy, and provide actionable insights through interactive dashboards for stakeholders.

Key Responsibilities:

- Collected, cleaned, and preprocessed large transactional datasets.
- Performed EDA to identify patterns, anomalies, and trends.
- Built machine learning models (Logistic Regression, Decision Trees, Random Forest, XGBoost) for fraud detection.
- Evaluated model performance using Precision, Recall, F1-Score, and ROC-AUC.
- Applied feature engineering to improve accuracy and reduce false positives.
- Created dashboards in Power BI for monitoring fraud alerts.
- Ensured compliance with data security and privacy regulations.

EDUCATION

B.E. (Electronics and Telecommunication Engineering) 2023
